Our services

The Europe Architecture and Construction team has a wealth of experience in designing and managing the re-branding, refurbishment, extension and new-build of Hilton Worldwide hotels. Our professional team covers a diverse range of construction and design disciplines to provide procurement advice, architectural and interior design advice, service installation design advice and cost advice throughout the hotel development process.

Project Management

For every development opportunity a Project Manager will be nominated from within the team. The Project Manager will be the principle point of contact for our development partner during the entire hotel development process from inception to opening. The Project Manager is there to facilitate the smooth and trouble-free delivery of the highest quality hotel product that incorporates the following fundamental components of any Hilton hotel from an Architecture and Construction perspective:

- Cost effective and compliant design and construction
- Operational efficiency
- Architectural and interior design excellence
- Energy efficient and sustainable through construction and in operation

Design

The role of the Global Design Services group is to provide design services for key areas of the hotel, including optimising the spatial requirements and operational relationships in both front and back of house areas of the hotel. Interior design excellence is a key factor in all Hilton hotels and the team provide both advice and assistance in this area and are happy to recommend relevant interior design consultants for each project.

All of this culminates in our overall objective of delivering exceptionally designed hotels, whilst remaining cost effective and operationally efficient

Shared Services

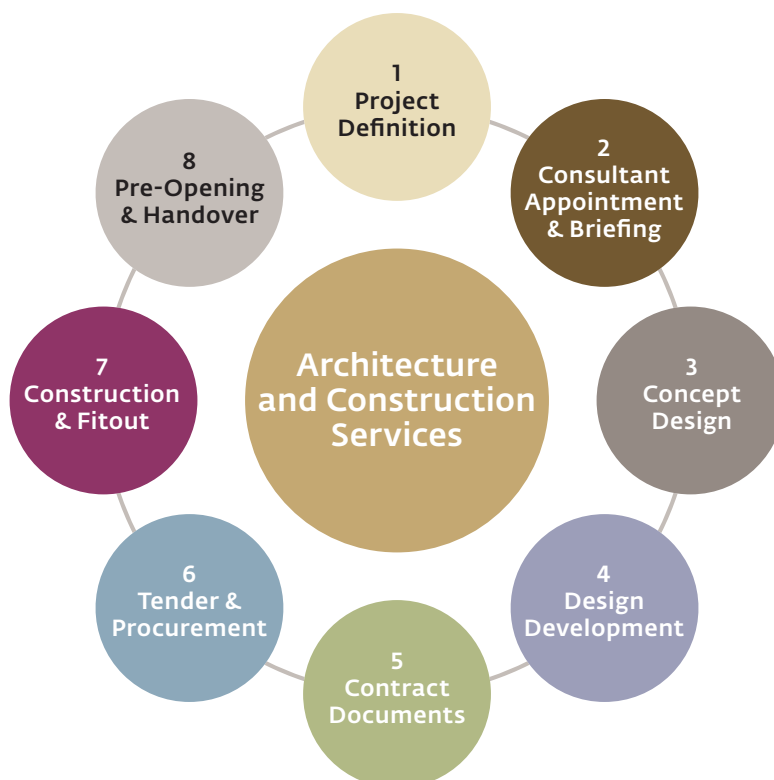

The Global Shared Services team are the champions and experts of the Hilton Worldwide portfolio of brands' Design and Construction Standards. They are there to assist in the interpretation

and application of the standards across all areas of the hotel to enable cost effective solutions to be implemented.

The engineering and sustainability team will assist with the delivery of a hotel that not only conforms to Hilton Worldwide's overall global environmental and sustainability initiatives and targets, but also is efficient in terms of energy consumption and economical to operate over the life of the hotel.

In addition, a dedicated FF&E team provides assistance with the compilation of FF&E and OSE schedules for the hotel project and constantly works with our internal sourcing team and supply chain to ensure that product selection is always current and relevant, and delivers best value for our partners.
